

VERTICAL MACHINING CENTER RANGE

The Vcenter Range Profile

Increased productivity with every machining

Victor Taichung – an established ISO 9001 & 14001 company

Vcenter - 55/70/85A/102A

High speed, high production machining centers that can make light work out of the most demanding of production schedules.

Rapid feedrates of 36/36/24 m/min on Vcenter-55/70 and 36/36/20m/min on Vcenter-85A/102ATool changes of 1.5 seconds (T-T)8000 rpm spindle with rigid tappingBellows type guarding on Z axisLarge work table for 4th axis applications3 axis linear motion slideways

Victor Machining

Vcenter - 85C/102C/110/130

Machining centers that mix high production demands with heavy cutting conditions.

Rapid feedrates of 36/36/18 m/min on Vcenter-85C/102C and 24/24/18 m/min on Vcenter-110/130 Tool changes of 1.5 seconds Tool capacity of 24 tools Very large work table for 4th axis applications 6000 rpm spindle with heavy duty roller bearings Spindle oil cooler (optional for Vcenter-85C/102C) <u>Z axis box slideway</u>

Victor Taichung's Own Spindle Assembly

Spindle and headstock are both in-house designed and manufactured in the air conditioned assembly room to assure high quality and reliability.

Every spindle has been inspected and tested with her own test record.

Run-up Testing

Vision Inter

Vertical Center Rance

Vcenter - 85B/102B/145/165

Machining centers built to withstand the heaviest of today's cutting conditions.

Heavy duty spindle roller bearings

Bonded with low friction composite Turcite B

- All boxways with constant forced lubrication
- 2 speed gearbox for high torques at low rpm (optional for Vcenter-85B/102B)

<u>3 axis box slideways</u>

Vcenter - 55/70 APC

Standard VMC with compact high speed APC Front mounted APC allows easy access to both machine work area and pallet.

Pallet loading capability of 200 kg for increased working range

Pallet size 560 x 400 mm(Vcenter-55APC) / 720 x 400 mm(Vcenter-70APC) with bolt holes for work location

Idle pallet is easily removed to allow use of additional pallets

Hydraulic pallet clamping for max. stability during machining

Direct mounted to machine for easy installation and reduced floor space

Servo-driven rotary APC for fast pallet exchange 3 seconds(P-P)

Front mounted APC with ergonomic design to allow easy operator access to pallet spindle and machine work area

LTTT -

Maximum spindle heavy duty spindle

A cartridge type spindle is used offering greater flexibility with a range of spindle configuration. Unlike our competitors, maximum support is offered around the spindle cartridge with a headstock casting that extends down as far as the spindle nose so that the bearing load areas are supported by the headstock as well as the cartridge.

This heavy casting ensures any residual vibration is absorbed by the headstock rather than tooling only.

Air curtain is included as standard to prevent the swarf getting into the spindle.

Optional spindle oil cooler can be easily installed to offer constantly circulating cooling oil around the spindle cartridge.

Ram & Arm type ATC

Rapid tool change is facilitated through the use of twin arm independent tool magazine with bidirectional random selection.

The cam driven ATC offers optimal reliability and excellent service life. Side mounting of tool magazine ensures tools are kept out of machining area and free of swarf.

Direct coupled servomotors

To eliminate motor backlash all servo motors are direct coupled to the ballscrews while flexible couplings eliminate any noise due to minor misalignments encountered with other transmission systems.

Coolant flush onto bottom guarding

High pressure coolant flushing away the swarf from the bottom guarding assures optimal chip disposal efficiency during machining.

" " type telescopic cover to avoid the swarf accumulation.

Superior casting design

Advanced Finite Element Analysis technique is used to develop the rib structure to meet strict requirement for fast feed rate.

Machine bed and column are made of nodular gray iron providing optimal damping properties while all castings are carried out following Meehanite process.

VICTOR NC Package

FANUC 0i / 32i / 31i controllers to meet various requirement for batch production or high speed machining.

Heidenhain TNC-620 / i530 controller with userfriendly conversational function to meets mold manufacturing requirement.

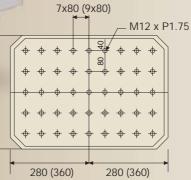

Optional APC (Auto Pallet Changer)

To eliminate idle time due to workpiece loading and unloading, double pallet APC is available. Rotary type APC front mounted on the machine offers quick change-over time 3 seconds (pallet to pallet) or 12.5 seconds (chip to chip) including air sealing detecting time to assure high reliability. Direct mounted to machine for easy installation and reduced floor space.

Front mounted Y-axis motor

The Y axis servo motor is front mounted to reduce the overall length of the ballscrew thus reducing the thermal displacement and increasing structure rigidity.

00t

Vcenter - 85 / 102 "ABC"

Innovative design with versatile models A : All linear guides for 3 axes B : Box slideways for 3 axes C : Combined design with box slideway column

Efficient tool changer

Twin arm type ATC performs better overall continuous tool changes compared with disc type tool changer, while at the same time offering faster tool change - merely 1.5 seconds with BT-40 tooling. Victor's PLC design allows tools to be exchanged with oversized tools in a single time - no need to waste time with 2 separate tool changes. Optional BT-50 tooling with GEARBOX and 24 tool magazine enhances the machining power for heavy cutting (Model B).

Strong machine structure

Stiffness enhanced column with big triangle bottom offers the maximum cutting stability whatever this machine is used with rapid feed (Model A) or with heavy cutting (Model B). Machine bed and saddle feature triangular cast structure to evenly distribute the machine loading, while cross diagonal

ribbing in the column minimizes distortion and twisting during operation. All major structural components are made from Meehanite cast

All major structural components are made from Meehanite cas iron to ensure consistent homogenous castings.

Front mounted Y axis servo motor

Superior structure stiffness with the optimal rail spacing 700 mm supports the long table at the travel end of X axis movement. THREE supporting blocks in each X-axis guide and 2 blocks in each Y-axis guide guarantees the accuracy requirement. The Y axis servo motor is front mounted to reduce the overall length of the ballscrew thus reducing the thermal displacement and increasing structure rigidity.

Versatile heavy duty spindle

The spindle is supported with heavy duty roller bearings with large contact areas that easily handles large axial and radial loads, while computer modeling helps determine bearing locations for maximum spindle stiffness. 8000 or 6000 rpm modularized spindle meets different machining demands. Optional 2-speed gearbox coupled with powerful spindle motor offers

> unrivaled metal removal rates. Oil cooling to the spindle and gearbox maintain low bearing temperature for extended spindle life.

> > Optional spindle oil cooler can be easily installed to offer constantly circulating cooling oil around the spindle cartridge.

Versatile slide ways for optimal dynamic stiffness

The box slideways (Models B, C) are cast into the machine so no distortion occurs due to thermal differences between the slide-ways and machine casting! This maintains alignment of the ways throughout the machine life.

The plain bearings with large contact areas increases the dynamic stiffness and damping properties so the machine can handle high cutting feeds and heavier cuts.

Forced lubrication and bonded Turcite-B further improves performance by eliminating stick slip characteristics normally inherent in plain bearings.

Ball bar testing is used to verify machine accuracy in circular interpolation.

Coolant flush onto bottom guarding

High pressure coolant flushing away the swarf from the bottom guarding assures optimal chip disposal efficiency during machining.

" Λ " type telescopic cover to avoid the swarf accumulation. (for Models A,C)

Minimizing the effects of thermal growth

Symmetrical design and construction means heat generation is limited to minimize the effects of thermal growth on machine accuracies. Double-anchored ballscrews are pretensioned during assembly to absorb heat with minimal thermal growth. Effective chip evacuation from the machining area improves heat dissipation from the working area, while spindle oil cooling prevents excessive spindle growth.

Vcenter - 110 / 130

lassimum spindle heavy duty spindle

- A cartridge type spindle is used offering greater flexibility with a range of spindle configuration. Unlike our competitors, maximum support is offered around the spindle cartridge with a headstock casting that extends down as far as the spindle nose so that the bearing load areas are supported by the headstock as well as the cartridge.
- This heavy casting ensures any residual vibration is absorbed by the headstock rather than tooling only.
- Air curtain is included as standard to prevent the swarf getting into the

24 tool magazine

- Twin arm type ATC with 24 tool magazine guarantees cutting flexiability for most applications.
- Optional 32 tool magazine (chain type) or BT-50 24 tool magazine with gearbox are both available.

Triangular ribbed bed casting for improved support

to guideways.

Superior casting design

Machine bed and column are made of nodular gray iron providing optimal damping properties while all castings are carried out following the Meehanite process. Emphasis is placed on the rib structure rather than weight ratio is obtained.

Advanced Finite Element Analysis technique is used to develop the rib structure to meet strict requirement for fast feed rate.

Spindle oil cooler (standard)

While the spindle structure is built for maximum rigidity, it is also necessary to ensure maximum reliability and long bearing life. Cooling oil constantly circulates around the spindle cartridge to maintain the low temperature through the spindle rotation.

Automatic forced lubrication

Lubricating oil is continuously supplied to all moving ways prolonging service life of the machine. Furthermore a drip supply of oil is provided to the ballscrews for both lubrication and heat dissipation. The oil supply is continually monitored by the control system so that any drop in pressure or leak is automatically detected and an alarm given. A lip around the machine bed collects the excess oil so that it can be re-circulated.

Three Y axis linear guides

Superior structure stiffness with the optimal rail spacing supports the long table at the travel end of X axis movement. THREE Y axis linear guide design minimizes table overhang deformation due to gravity.

THREE supporting blocks in each X-axis guide and 2 blocks in each Y-axis guide with width 35 mm (Vcenter-110) / 45 mm (Vcenter-130) guarantees the accuracy requirement.

Long Y axis travel with front mounted servo motor

Long travel 600 mm.

The Y axis servo motor is front mounted to reduce the overall length of the ballscrew thus reducing the thermal displacement and increasing structure rigidity.

Coolant flush onto bottom guarding

High pressure coolant flushing away the swarf from the bottom guarding to assure optimal chip disposal efficiency during machining.

560mm

Vcenter - 145/165

Heavy duty spindle

- The spindle is supported with heavy duty roller bearings with large contact areas that easily handles large axial and radial loads, while computer modeling helps determine bearing locations for maximum spindle stiffness.
- The 2-speed gearbox coupled with powerful spindle motor offers unrivaled metal removal rates. Oil cooling to the spindle and gearbox maintain low bearing temperature for extended spindle life.

Efficient tool changer

Twin arm type ATC with 24 tool disk magazine performs better overall continuous tool changes compared with disc type tool changer, while at the same time offering faster tool change: merely 4.9 seconds with BT-50 tooling.

Victor's PLC design allows tools to be exchanged with oversized tools in a single time - no need to waste time with 2 separate tool changes.

Optional 32 or 40 tool magazine is available.

Spindle oil cooler (standard)

While the spindle structure is built for maximum rigidity, it is also necessary to ensure maximum reliability and long bearing life. Cooling oil constantly circulates around the spindle cartridge to maintain the low temperature during the spindle rotation.

Minimizing the effects of thermal growth

Symmetrical design and construction means heat generation is limited to minimize the effects of thermal growth on machine accuracies. Double-anchored ballscrews are pretensioned during assembly to absorb heat with minimal thermal growth. Effective chip evacuation from the machining area improves heat dissipation from the working area, while spindle oil cooling prevents excessive spindle growth.

Precision machine alignment

The traditional method of handscraping remains the most effective way of ensuring squareness and flatness in machine tools using plain bearing linear ways.

With over 50 years experience in building machine tools using this traditional manufacturing manner, our understanding of the critical factors that ensure accuracy and

durability are second to none.

Highly skill personnel, trained in-house, are employed to make sure this handscraping is done to perfection. Ball bar testing is used to verify

machine accuracy in circular interpolation.

VICTOR NC Package

FANUC 0i / 32i / 31i controls meet various requirement for batch production or high speed machining.

Heidenhain iTNC-530 controller with user-friendly conversational function to meets mold manufacturing requirement.

Box slideways for optimal dynamic stiffness

Especially 4 box slideways used on the Y-axis eliminate table overhang and stabilize machine performance.

The box slideways are cast into the machine so no distortion occurs due to thermal differences between the slide-ways and machine casting to maintain alignment of the ways throughout the machine life.

The plain bearings with large contact areas increase the dynamic stiffness and damping properties so the machine can handle high cutting feeds and heavier cuts.

Forced lubrication and bonded Turcite-B further improves performance by eliminating stick slip characteristics normally inherent in plain bearings.

10

Vcenter-145

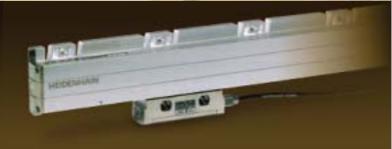

Workpiece measurement

To reduce time spent setting workpiece positions and then manually inspecting finished parts, which would be better invested in machining, automatic workpiece measurement is available with the use of Renishaw[®] OMP-60 measuring probe.

With the system provided by Victor the workpiece position can be identified with the probe and work offsets automatically updated, enabling parts to be made right first time. During batch production in-processing checking can be performed on the machine, while for optimum accuracy in machining part inspection can be done after roughing so that finished part can maintain tight tolerances.

Linear scales for improved repeatability

Linear scales offer exceptional positioning accuracy up to 0.005 mm over full stroke. Only Heidenhain linear scales with a thermal behaviour similar to that of the machine are selected so that thermal expansion can be compensated for further enhancing repeatability. Sealed encoders with durable Aluminum housing offer improved reliability and service life.

Automatic tool measurement

To reduce tool set-up time and improve machine operator interface Victor offers 2 automatic tool measuring systems:

Simple tool length measurement

Metrol system T - 20B is mostly for tapping and drilling, as the probe used only measures the tool length. This simple cost effective system greatly reduces tool set-up time by automatically inputting tool length values once the tool is tipped off the probe.

Advanced tool measurement

Renishaw system TS - 27R offers further advancement with the probe capable of measuring both tool lengths and diameters. This system is ideal for batch production where tools need to be constantly changed or replaced.

4th-axis CNC rotary table

To improve the machine's application range, a CNC rotary table can be installed with which 4 axes simultaneous machining can be realized. This function can eliminate multiple set-ups allowing multiple faces to be machined with a single set-up.

5^{th} -axis rotary table is also available with tilting as well as rotary function.

Tilting B-axis is indexable with Fanuc 0i / 32i / 31i or full simultaneous rotation with Fanuc 31i-B5 control.

Fully enclosed guarding with optional CE marking

The machine is designed to meet the strictest safety standards with fully enclosed guarding to prevent operator access to the machining area during operation and coolant leaks in using high pressured coolant (optinal on Vcenter-145). All electrical components meet CE mark requirements while optional door interlocks and magazine guarding bring the machine up to full CE standard.

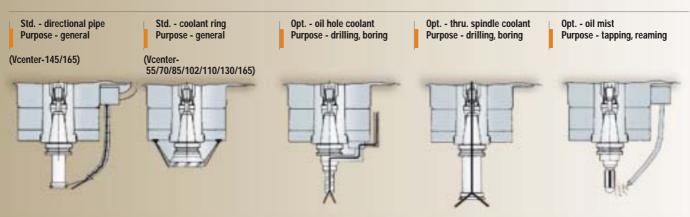

Through spindle coolant

For improved deep drilling and boring capability, coolant can be forced through the center of the spindle under high pressure directly to the cutting area. To ensure long and reliable running of this system, fine particles produced during machining must be filtered out to prevent damage to the spindle. Victor's customized cleaning system by centrifugal dispersion or replaceable filter cores is far more reliable with less maintenance than conventional system to avoid the fine particles flowing into the spindle.

Oil hole coolant

As an alternative to through spindle coolant, it is possible to supply coolant through the toolholder, using an adaptor located on the spindle nose. High pressure (Grundfos pump SPK 2-3) can be supplied with no need for sophisticated filter system as the coolant bypasses the spindle.

Coolant Options

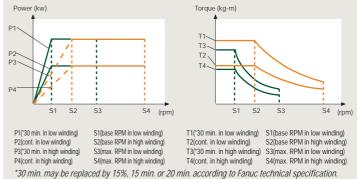

Victor Taichung's Own Spindle

6000/8000/10000 rpm belt-driven spindle

Our modular headstock design offers the options 6000 / 8000 / 10000 rpm belt-driven spindles as a cost effective solution for production work and job shops requiring high spindle speed.

- Rigid structure utilizing roller bearings for maximum radial support
- High torque output at low rpm
- Superior run-out under heavy cutting

12000/15000rpm directly coupled spindle

Without belt tension and noise, the directly coupled spindle (DCS) offers high speed cutting with minimal vibration for improved surface finish and accuracy. Oil cooling through the spindle cartridge minimizes thermal growth at high speed, and a separate air curtain circulated around the front bearings ensures bearings and motor are kept free of contamination for longer service life.

Gearbox for extra torque in heavy cutting

Victor Taichung offers gearbox circulated with the coolant oil to minimize noise at high speeds to prolong gear life. For high efficient power transmission, minimal backlash gears are used to guarantee smooth running.

Victor Taichung's NC Package

Fanuc 0i-MD/32i/31i controls

Guarantee reliability and stability from over 30 years experience

Having worked closely with FANUC since we developed our first CNC machine in 1978, our standard Fanuc 0i-M control package offers optimum reliability with the highest level of machine integration to meet the demands of most productions. With PLC developed in-house by highly experience engineers, Victor Taichung's Vcenters offer numerous safety features and maximum machine efficiency. For higher speed and precision, the control option Data Server board can be installed to extend the memory length for upgrading the data transfer rate. The machine controller can be upgraded to 31i-B control which is capable of addressing 600 blocks as standard and optionally 1000 blocks available by the so-called AICC-2 with HSP function (High Speed Processing) to further reduce the block addressing time for better surface finish.

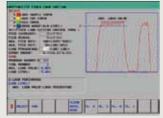

MGI (Manual Guide i) + VSS (Victor Smart Software) Macros

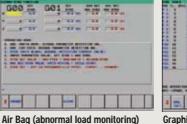

With the optional 10.4" color display included, Victor Taichung's Fanuc control package includes conversational function MANUAL GUIDE I (MGI) to reduce the programming time for easier operation. Through the latest technology for AI contouring control (AICC), Fanuc 0i-MD control is capable of addressing look-ahead up to 200 blocks to offer optimal reliability with the highest level of machine integration. Through exclusive software developed in-house by highly experienced engineers, VSS macros enhance not only operation to reduce tool set-up time but also safety features to protect costly spindle. Productivity can be further increased when the adaptive controlled cutting is implemented.

Smart workpiece measurement

Adaptive cutting at constant loading

Heidenhain TNC-620/iTNC-530 control

Powerful dialog programming (SmartNC®) with fully alphanumeric keyboard, Heidenhain control iTNC-530 are also available on Vcenter's range. Without remembering complicated G codes, sophisticated graphic functions with 15" TFT monitor make programming check easy. Hiedenhain iTNC-530 is capable of addressing 256 blocks and further make use of hard drive memory for advanced 4 or 5 axis simultaneous control. The new controller TNC-620 including the advanced programming and graphics features as Victor's standard is also available on Vcenter-55/70/85/102 to lower investment costs.

- \cdot Hand tools and tool box
- \cdot T nuts for table slot
- Coolant flush on bottom guarding (except Vcenter-145)
- \cdot Built-in work light
- Spindle oil cooler (only for Vcenter-110/130/145/165)
- \cdot Auto power off system
- \cdot Leveling blocks
- · Program end light
- Rigid tapping
- · Alarm lamp

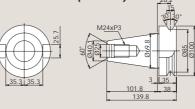

- Remote MPG
- Air conditioner for electrical cabinet
- Screw chip removers (for Vc-165)
- Air blow (by M-code control)

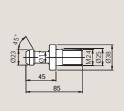

Tool shank (BT-40)

Optional accessories

- Chip conveyor with cart
 (2 chip conveyors for Vcenter-145)
 (Please specify when machining Aluminum or Cast Iron)
- Spindle oil cooler (for Vcenter-55/70/85/102)
- 2-step gearbox (max. spindle speed 6000 rpm) High speed spindle
- (10000,12000,14000,15000, 20000 rpm) • High powered spindle motor
- Oil hole coolant
- · Coolant through spindle

- Air blow system
- · Linear scale feedback
- Auto tool length measurement
- · Electrical counterbalance
- · Workpiece measurement
- · 4th axis rotary table
- · Higher column with spacer
- Table shower system
- Semi enclosed splash guarding (for Vc-145 only)
- BT-50 tooling with gearbox (for Vcenter-85/102/110/130)

Victor Taichung's Fanuc 0i-MD/32i-B/31i-B Control Specifications

Standard:

ITEM SPECIFICATION

DESCRIPTION

1.	and Array	
1.	led Axes:	3 Axes (X, Y, Z)
	Controlled Axes	Position / Linear Interpolation / Circular
2.	Simultaneous Controlled Axes	Interpolation (3 / 3 / 2)
3.	Least Input Increment	0.001 mm / 0.0001 inch / 0.001 deg.
4.	Least Input Increment 1/10	0.0001 mm / 0.00001 inch / 0.0001 deg.
5.	Max, Command Value	± 99999.999 mm (± 9999.9999 in)
5.	Fine Acceleration & Deceleration Control	Std.
7.	High Speed HRV Control	Std.
3.	Inch / Metric Conversion	Std. (G20 / G21)
9.	Interlock	All Axes / Each Axis / Cutting Block Start
10. 11.	Machine Lock	All Axes / Each Axis
12.	Emergency Stop	Std. Std.
12.	Over-Travel Stored Stroke Check 1 And Check 2	Std.
14.	Mirror Image	Each Axis
15.	Mirror Image M73, M74, M75, M76	X, Y Axes
16.	Follow-Up	Std.
17.	Position switch (with Victor's own PLC)	Std.
Operatio		
1.	Automatic Operation	Std.
2.	MDI Operation	MDI B
3.	DNC Operation	Reader / Puncher Interface Is Required
4.	DNC Operation With Memory Card	PCMCIA Card Attachment Is Required
5.	Program Number Search	Std.
6.	Sequence Number Search	Std.
7.	Sequence Number comparison and stop	Std.
3.	Buffer Register	Std.
7.	Dry Run	Std.
10.	Single Block	Std.
11.	Jog Feed	Std.
12.	Manual Reference Position Return	Std.
13.	Manual Handle Feed	1 Unit / Each Path
14.	Manual Handle Feed Rate	X1, X10, X100
15.	Z Axis Neglect	Std.
Interpol	ation:	
1.	Positioning	G00
2.	Single Direction Positioning	G60
3.	Exact Stop Mode	G61
4.	Exact Stop	G09
5.	Linear Interpolation	G01
6.	Circular Interpolation	G02, G03 (Multi-Quadrant Is Possible)
7.	Dwell	G04
В.	Helical interpolation	Std.
9.	Skip Function	G31
10.	Reference Position Return	G28
11.	Reference Position Return Check	G27
12.	2 nd / 3 rd / 4 th Reference Position Return	Std.
Feed:		
1.	Rapid Traverse Rate	Std.
2.	Rapid Traverse Override	F0, 25%, 50%, 100%
3.	Feed Per Minute	G94 (mm / min)
4.	Tangential Speed Constant Control	Std.
5.	Cutting Feed Rate Clamp	Std.
6.	Automatic Acceleration / Deceleration	Rapid Traverse: Linear; Cutting Feed: Exponentia
7.	Rapid traverse Bell-shaped Acc. / Deceleration	Std. (G00)
8.	Bell-shaped Acc. / Deceleration Before & After Cutting Feed Interpolation	Std. (G01)
9.	Automatic Corner Deceleration	Std. (G64)
10.	Linear Acc / Deceleration Before & After Cutting Feed	Std. (G01)
	Interpolation	
	Feed Rate Override	0~150%
	Jog Override	
12.		0~100%
12. 13.	Automatic Corner Override	G62.
12. 13. 14.	Feed Stop	G62. Std.
12. 13. 14. 15.	Feed Stop Al contour control (AICC, G05.1) (in total)	G62. Std. 200 blocks (0i/32i with AICC-2)

VictorTaichung **Taichung, the home of Machine Tool Manufacturing**

Quality Meehanite Castings-The backbone of VICTOR TAICHUNG machines. Being both ISO 9001 approved and a Meehanite cast member, our foundry produces over 1000 tons of castings a month for both our own use and export to Japan.

Modern machining facilities-65% of components manufactured in house. To ensure greater control over the quality of our machined parts, VICTOR TAICHUNG has introduced 3 giant 5-side machining centers, 1 CIM line for sheet metal manufacturing and 2 complete FMS lines developed in house.

a global distribution network. As well as numerous agents around the world, VICTOR TAICHUNG has 9 overseas subsidiaries in USA, England, France, Germany, South Africa, Malaysia, Thailand, Indonesia and China to provide our customers efficient after-sales service and technical supports.

Overseas subsidiaries solely dedicated to service of our own products.

To ensure a market for our products, VICTOR TAICHUNG has invested considerably in setting up
